

A leading US-based global financial institution

What the Company Needed

Client was grappling with a sharp rise in AML alerts, resulting in slower investigation turnaround times, inconsistent decision-making, and heightened regulatory & compliance risk. Fragmented data across accounts, transactions, and historical investigations further compounded analyst fatigue. It needed a smarter, scalable solution that could unify data, streamline investigations, and improve accuracy without significantly increasing headcount.

How Genpact Helped

Genpact deployed the riskCanvas-powered Agentic Research Assistant to unify transaction data, account activity, and investigation history into a real-time view. The platform automated alert analysis with contextual insights, enabling faster, informed decisions and standardized workflows. Combining intelligent automation with human oversight, it enhanced analyst capabilities without replacing them

Value Delivered

- ❑ Faster, more accurate AML investigations.
- ❑ Reduced alert cycle times across FCRM operations.
- ❑ Enhanced detection of suspicious activity.
- ❑ Improved compliance oversight and audit readiness.
- ❑ Empowered analysts to focus on high-value, judgment-based decisions instead of manual data gathering.
