

A major Europe-based organization operating with a fast-growing digital ecosystem

What the Company Needed

Client relied on legacy, on-premises infrastructure that struggled to support increasing workloads and digital demand. Frequent downtime, limited scalability, and high maintenance costs were impacting business performance. Further, the lack of centralized visibility and security controls made it difficult to ensure compliance and manage risks effectively. It needed a more agile and resilient infrastructure to support its growth and innovation goals.

How Genpact Helped

Genpact designed and implemented a robust cloud transformation strategy, migrating critical workloads to a secure, scalable cloud environment. Our solution included re-architecting applications into cloud-native services, enabling auto-scaling and high availability. We also established centralized monitoring, advanced security frameworks, and cost-optimization mechanisms. Automated deployment pipelines were introduced to accelerate releases and improve operational efficiency.

Client Impact

- ❑ Reduced infrastructure costs through optimized cloud usage.
- ❑ Improved uptime and reliability with high-availability design.
- ❑ Enhanced scalability to support changing business demands.
- ❑ Strengthened security and compliance with centralized controls.
- ❑ Accelerated deployments and innovation through automation.
