

A leading consumer goods company based in Europe

What the Company Needed

Client faced significant challenges with an outdated and fragmented network infrastructure that struggled to support growing omnichannel operations. Frequent network outages and high latency impacted store operations, online transactions, and customer experience. Limited network visibility made it difficult to detect and resolve issues proactively. Additionally, inconsistent security policies across locations increased vulnerability to cyber threats and compliance risks.

How Innover Helped

Innover built a cloud-first digital infrastructure for the client's global operations, modernizing legacy systems, enabling seamless platform integration, and adding real-time monitoring. We also strengthened their cybersecurity framework and ensured compliance with regional regulations. Our scalable architecture allowed the client to handle growing workloads efficiently while improving system resilience and performance.

Client Impact

- ❑ Reduced system downtime by over 40%, ensuring higher service availability.
- ❑ Improved transaction processing speed by 30%.
- ❑ Enhanced security posture and ensured compliance across multiple regions.
- ❑ Enabled real-time infrastructure monitoring and proactive issue resolution.
- ❑ Achieved scalable infrastructure capable of supporting future global growth.
