

A major U.S.-based bank serving millions of customers nationwide

Problem Statement

Client faced challenges modernizing its legacy banking systems while maintaining strict regulatory compliance. Disparate platforms resulted in inefficiencies, slow deployment cycles, and increased operational risks. It was unable to meet customer expectations for seamless digital experiences owing to outdated infrastructure. Additionally, scaling services securely across channels was becoming increasingly complex and costly.

Solution Offered

Genpact delivered a comprehensive software engineering solution focused on cloud-native architecture and microservices. Legacy systems were re-engineered into modular components, enabling faster development and deployment. We implemented robust security protocols aligned with regulatory requirements and integrated automated testing and CI/CD pipelines. Our solution also enhanced API capabilities to support seamless digital banking experiences across platforms.

Impact Delivered

- Reduced application deployment time by over 60%
- Improved system scalability and performance across digital channels
- Enhanced compliance and security posture with modern safeguards
- Lowered operational costs through streamlined infrastructure
- Delivered a faster, more intuitive customer experience
